

Minisoft Announces Strategic Alliance with PICS

Leading Provider of Enterprise Document Management Software Integrates with Minisoft's eFORMz to Fulfill DocLib Users' Business Form Requirements

SNOHOMISH, Wash. —April 26, 2012—Minisoft Inc., a leading supplier of forms generation and email marketing solutions, announced today that it has formed a strategic alliance with PICS to integrate Minisoft's eFORMz with PICS DocLib for the benefit of their mutual QAD customers.

DocLib is an enterprise-wide document and business process management solution. DocLib acts, as the name suggests, as a document library. DocLib's suite of applications includes intelligent document capture, a secure database repository, a workflow module to manage and control business processes, a data capture engine to generate transactions, and a fast, efficient method of locating content throughout the enterprise. DocLib fully integrates its powerful management tools seamlessly into a company's operation. This allows any business to streamline its processes with an electronic, workflow-enabled system – empowering companies to focus on their business, rather than the software that's running it.

With eFORMz, DocLib users can format and personalize any standard QAD print stream or spool file to create attractive, functional and efficient documents that can be distributed via print, fax, email and the web. In addition, eFORMz can populate forms directly from Progress, Oracle and SQL Server databases.

DocLib customers can use eFORMz to produce purchase orders, shipping labels, barcodes, bills of lading, analysis reports, checks, invoices, and more, all while incorporating logos and other customized graphics for a pre-built, out-of-the-box experience.

About PICS
